Data Transfer Report - 30-mm Enhanced Alternate High-Energy Propellant Program (EAHEP): Test Fixture and Propellant Evaluation

Melvin B. Ridgley, Sr., Joseph W. Colburn Weapons and Materials Research Directorate, ARL

Approved for public release; distribution is unlimited.

Abstract

Measurements in support of the 30-mm Enhanced Alternate High Energy Propellant Program (EAHEP) were taken at the Building 390 recording facility. Propellants evaluated for this series of tests were M30, U.S. Army Armament Research, Development, and Engineering Center (ARDEC) 7994, BAMO-AMMO/CL20, BAMO-AMMO/CL20/NQ, and BAMO-AMMO-RDX. This facility, the central data acquisition network for the Propulsion and Flight Division (PFD) of the U.S. Army Research Laboratory (ARL), was operated by the Experimental Ballistics Team (EBT) of the Propulsion Branch (PB). The testing was conducted in support of an ongoing Army effort to further investigate high-energy gun propellants that promise enhanced performance from existing tank and artillery systems.

1. Background

Measurements in support of the 30-mm Enhanced Alternate High-Energy Propellant Program (EAHEP) were taken at the Building 390 recording facility. Propellants evaluated for this series of tests were M30, U.S. Army Armament Research, Development, and Engineering Center (ARDEC) 7994, BAMO-AMMO/CL20, BAMO-AMMO/CL20/NQ, and BAMO-AMMO-RDX. This facility, the central data acquisition network for the Propulsion and Flight Division (PFD) of the U.S. Army Research Laboratory (ARL), was operated by the Experimental Ballistics Team (EBT) of the Propulsion Branch (PB). The testing was conducted in support of an ongoing Army effort to further investigate high-energy gun propellants that promise enhanced performance from existing tank and artillery systems.

2. Test Objectives

The test objectives were to promote the evaluation of novel, high-energy gun propellants that promise enhanced performance from existing tank and artillery systems and to provide a facility that can assess the interior ballistic performance characteristics of small quantities of these propellants. Pertinent test information is detailed on the in-house branch firing request form, Appendix A. Test sample quantities, configurations, and data acquisition inputs were as requested by the project engineer. Appendix B shows a generalized gun configuration and pressure port locations, both in the chamber as well as in the barrel. In addition, it shows the range setup for the test. This report formally documents the data acquired during these tests for further use by the project engineer. Any technical information concerning the test setup or data should be solicited from the project engineer.

3. Summary of Results

A robust and easy-to-use test gun was required for the evaluation of small quantities (up to 125 g) of high-energy solid propellant samples. Due to funding constraints, a test gun was

designed based on available residual 30-mm hardware from a GT Devices (GTD)/General Dynamics Land Systems (GDLS) gun supplemented by existing ARL medium-caliber gun system components and several new parts. Unique features of the design include a simple dependable igniter system, which delivers a smooth ignition pulse to the experimental propelling charge; a robust chamber-tube seal system; and a ring-assisted stub case seal. These features permit safe, easy, and fast turnaround operations with the test gun. This report summarizes the data obtained during proof testing of the gun fixture and the initial propellant evaluation test series.

Experimental firing data and ignition system parameters are tabulated in Appendix C. The instrumentation typically used to acquire data during testing is as follows:

- (1) In-bore doppler radar (35 GHz) to measure the interior ballistic trajectory.
- (2) Discriminator system to measure projectile velocity.
- (3) Kistler 607C3 piezoelectric pressure transducers in gauge positions as shown in Appendix B to measure chamber and barrel pressures.
- (4) Downrange break screens to measure velocity.

Appendix D provides an example of a standard firing program file (FPF) that includes a Run Summary for the 30-mm EAHEP fixture and channel description/calibration coefficients for online and analog tape (A) for the EAHEP test rounds. Due to the number of rounds fired in this series, FPFs were not included for each round; however, Appendix E provides a summary of analog tape and digital acquisition system parameters. Twelve channels of data can be acquired on line using BALDAS II. It is standard procedure to back up the data on an analog tape recorder for future use or in case of computer malfunction.

4. Discussion and Results

Table 1 lists the test sequences with comments appropriate to instrumentation problems encountered for each test.

Table 1. Test Sequences and Accompanying Instrumentation Remarks

	5 .	
Test	Date	Comments
19	07 March 1996	EAHEP Gun 1 - M30 Propellant - good data
20	08 March 1996	EAHEP Gun 1 - M30 Propellant - P2L bad microdot cable

29	02 April 1996	EAHEP Gun 1 - 7994 ARDEC Propellant - good data
30	29 April 1996	EAHEP Gun 1 - 7994 ARDEC Propellant - good data
31	01 May 1996	EAHEP Gun 1 - 7994 ARDEC Propellant - good data
32	01 May 1996	EAHEP Gun 1 - 7994 ARDEC Propellant - good data
33	01 May 1996	EAHEP Gun 1 - 7994 ARDEC Propellant - good data
34	01 May 1996	EAHEP Gun 1 - 7994 ARDEC Propellant - good data
35	22 January 1997	EAHEP Gun 1 - M30 Propellant - good data
36	01 February 1997	EAHEP Gun 1 - M30 Propellant - good data
39	13 February 1997	EAHEP Gun 1 - B-A/RDX Propellant - Bad microdot cable, Barrel 3

During testing, the Building 390 recording room staff made the following specific contributions beyond the recording of data:

• Assisted with building and testing a different method for checking out break screens.

- When the signal from the discriminator seemed to drop out during test rounds 20, 22, 23, 25, and 26, traced the problem to an intermittent component on the frequency board and repaired it.
- Gave all ballistic data in the form of floppy disks (ASCII format), data plots, and FPFs to the project engineer at the conclusion of each test.

Appendix A:

Experimental Ballistics Team Firing Request

EXPERIMENTAL BALLISTICS TEAM FIRING REQUEST

BRANCH REQUEST: Advanced Propulsion Physics Branch

CONTRACTOR REQUEST: N/A

PROJECT TITLE: EAHEP Test Fixture and Propellant Evaluation

PROJECT ENGINEERS: J. Colburn, A. A. Juhasz, and A. Johnson

PURPOSE OF TEST: To promote the evaluation of novel, high-energy gun propellants that promise enhanced performance from existing tank and artillery systems. To provide a facility that can assess the interior ballistic performance characteristics of small quantities of these propellants.

TIME FRAME REQUEST: LENGTH OF TEST - 7 March 1996 to 13 February 1997

(Days and number of rounds): 16 Days, 21 Rounds

RANGE REQUIREMENTS:

GUN TYPE: 30-mm GDLS ETC

PROJECTILE TYPE: Slug

CHARGE TYPE:

PRIMER TYPE: M52

GUN INSTRUMENTATION: Pressure gauges in chamber and barrel.

RANGE INSTRUMENTATION:

- Interferometer
- Discriminator/Velocity
- Video/Audio
- Break Screens

INTERIOR BALLISTICIAN:

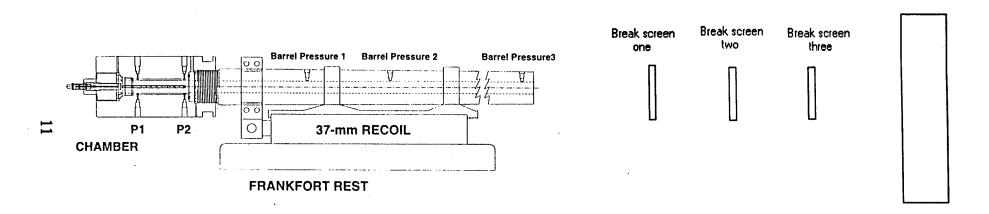

REVIEW OF TEST PLAN: A. A. Juhasz

OTHER REQUIREMENTS: As outlined by project engineer.

Appendix B:

Gauge Locations and Range Setup for the 30-mm Gun

EAHEP 30-mm Gauge Locations and Range Setup
